PREFACE	XVII
ABBREVIATIONS	XIX
OPERATORS AND SYMBOLS	XX
SI-UNITS	XXI
INTRODUCTION	1
1 MECHANICS.....	1
2 WHAT IS CONTINUUM MECHANICS?.....	1
2.1 Hypothesis of Continuum Mechanics	1
2.2 The Continuum	2
3 SCALES OF MATERIAL STUDIES.....	3
3.1 Scale Study of Continuum Mechanics	3
4 THE INITIAL BOUNDARY VALUE PROBLEM (IBVP)	6
4.1 Solving the IBVP.....	6
4.2 Simplifying the IBVP.....	7
1 TENSORS.....	9
1.1 INTRODUCTION.....	9
1.2 ALGEBRAIC OPERATIONS WITH VECTORS	10
1.3 COORDINATE SYSTEMS	16
1.3.1 Cartesian Coordinate System.....	16
1.3.2 Vector Representation in the Cartesian Coordinate System.....	17
1.3.3 Einstein Summation Convention (Einstein Notation)	20
1.4 INDICIAL NOTATION	20
1.4.1 Some Operators.....	22
1.4.1.1 Kronecker Delta.....	22
1.4.1.2 Permutation Symbol.....	23
1.5 ALGEBRAIC OPERATIONS WITH TENSORS.....	28
1.5.1 Dyadic	28
1.5.1.1 Component Representation of a Second-Order Tensor in the Cartesian Basis.....	32
1.5.2 Properties of Tensors	34
1.5.2.1 Tensor Transpose	34
1.5.2.2 Symmetry and Antisymmetry.....	36
1.5.2.3 Cofactor Tensor. Adjugate of a Tensor	42
1.5.2.4 Tensor Trace.....	42
1.5.2.5 Particular Tensors	44
1.5.2.6 Determinant of a Tensor	45
1.5.2.7 Inverse of a Tensor.....	48
1.5.2.8 Orthogonal Tensors	51

1.5.2.9 Positive Definite Tensor, Negative Definite Tensor and Semi-Definite Tensors.....	52
1.5.2.10 Additive Decomposition of Tensors.....	53
1.5.3 Transformation Law of the Tensor Components.....	54
1.5.3.1 Component Transformation Law in Two Dimensions (2D).....	61
1.5.4 Eigenvalue and Eigenvector Problem.....	65
1.5.4.1 The Orthogonality of the Eigenvectors.....	67
1.5.4.2 Solution of the Cubic Equation.....	69
1.5.5 Spectral Representation of Tensors.....	72
1.5.6 Cayley-Hamilton Theorem.....	76
1.5.7 Norms of Tensors.....	78
1.5.8 Isotropic and Anisotropic Tensor.....	79
1.5.9 Coaxial Tensors.....	80
1.5.10 Polar Decomposition.....	81
1.5.11 Partial Derivative with Tensors.....	83
1.5.11.1 Partial Derivative of Invariants.....	85
1.5.11.2 Time Derivative of Tensors.....	86
1.5.12 Spherical and Deviatoric Tensors.....	86
1.5.12.1 First Invariant of the Deviatoric Tensor.....	87
1.5.12.2 Second Invariant of the Deviatoric Tensor.....	87
1.5.12.3 Third Invariant of Deviatoric Tensor.....	89
1.6 THE TENSOR-VALUED TENSOR FUNCTION.....	91
1.6.1 The Tensor Series.....	91
1.6.2 The Tensor-Valued Isotropic Tensor Function.....	92
1.6.3 The Derivative of the Tensor-Valued Tensor Function.....	94
1.7 THE VOIGT NOTATION.....	96
1.7.1 The Unit Tensors in Voigt Notation.....	97
1.7.2 The Scalar Product in Voigt Notation.....	98
1.7.3 The Component Transformation Law in Voigt Notation.....	99
1.7.4 Spectral Representation in Voigt Notation.....	100
1.7.5 Deviatoric Tensor Components in Voigt Notation.....	101
1.8 TENSOR FIELDS.....	105
1.8.1 Scalar Fields.....	106
1.8.2 Gradient.....	106
1.8.3 Divergence.....	111
1.8.4 The Curl.....	113
1.8.5 The Conservative Field.....	115
1.9 THEOREMS INVOLVING INTEGRALS.....	117
1.9.1 Integration by Parts.....	117
1.9.2 The Divergence Theorem.....	117
1.9.3 Independence of Path.....	120
1.9.4 The Kelvin-Stokes' Theorem.....	121
1.9.5 Green's Identities.....	122
Appendix A: A GRAPHICAL REPRESENTATION OF A SECOND-ORDER TENSOR.....	125
A.1 PROJECTING A SECOND-ORDER TENSOR ONTO A PARTICULAR DIRECTION.....	125
A.1.1 Normal and Tangential Components.....	125
A.1.2 The Maximum and Minimum Normal Components.....	127
A.1.3 The Maximum and Minimum Tangential Component.....	128
A.2 GRAPHICAL REPRESENTATION OF AN ARBITRARY SECOND-ORDER TENSOR.....	130
A.2.1 Graphical Representation of a Symmetric Second-Order Tensor (Mohr's Circle).....	134
A.3 THE TENSOR ELLIPSOID.....	138
A.4 GRAPHICAL REPRESENTATION OF THE SPHERICAL AND DEVIATORIC PARTS.....	139
A.4.1 The Octahedral Vector.....	139

2 CONTINUUM KINEMATICS.....	145
2.1 INTRODUCTION.....	145
2.2 THE CONTINUOUS MEDIUM.....	146
2.2.1 Kinds of Motion.....	147
2.2.1.1 Rigid Body Motion.....	147
2.2.2 Types of Configurations.....	149
2.2.2.1 Mass Density.....	150
2.3 DESCRIPTION OF MOTION.....	151
2.3.1 Material and Spatial Coordinates.....	151
2.3.2 The Displacement Vector.....	152
2.3.3 The Velocity Vector.....	152
2.3.4 The Acceleration Vector.....	152
2.3.5 Lagrangian and Eulerian Descriptions.....	152
2.3.5.1 Lagrangian Description of Motion.....	152
2.3.5.2 Eulerian Description of Motion.....	153
2.3.5.3 Lagrangian and Eulerian Variables.....	153
2.4 THE MATERIAL TIME DERIVATIVE.....	156
2.4.1 Velocity and Acceleration in Eulerian Description.....	158
2.4.2 Stationary Fields.....	159
2.4.3 Streamlines.....	161
2.5 THE DEFORMATION GRADIENT.....	163
2.5.1 Introduction.....	163
2.5.2 Stretch and Unit Extension.....	163
2.5.3 The Material and Spatial Deformation Gradient.....	165
2.5.4 Displacement Gradient Tensors (Material and Spatial).....	168
2.5.5 Material Time Derivative of the Deformation Gradient. Material Time Derivative of the Jacobian Determinant.....	171
2.5.5.1 Material Time Derivative of F . The Spatial Velocity Gradient.....	171
2.5.5.2 Rate-of-Deformation and Spin Tensors.....	172
2.5.5.3 The Material Time Derivative of F^{-1}	174
2.5.5.4 The Material Time Derivative of the Jacobian Determinant.....	174
2.6 FINITE STRAIN TENSORS.....	176
2.6.1 The Material Finite Strain Tensor.....	177
2.6.2 The Spatial Finite Strain Tensor (The Almansi Strain Tensor).....	181
2.6.3 The Material Time Derivative of Strain Tensors.....	183
2.6.3.1 The Material Time Derivative of the Right Cauchy-Green Deformation Tensor.....	183
2.6.3.2 The Material Time Derivative of the Green-Lagrange Strain Tensor.....	183
2.6.3.3 The Material Time Derivative of.....	184
2.6.3.4 Material Time Derivative of the Left Cauchy-Green Deformation Tensor.....	184
2.6.3.5 The Material Time Derivative of the Almansi Strain Tensor.....	185
2.6.4 Interpreting Deformation/Strain Tensors.....	186
2.6.4.1 The Relationship between the Strain and Stretch Tensors.....	187
2.6.4.2 Change of Angle.....	188
2.6.4.3 The Physical Interpretation of the Deformation/Strain Tensor Components. The Right Stretch Tensor.....	189
2.7 PARTICULAR CASES OF MOTION.....	191
2.7.1 Homogeneous Deformation.....	191
2.7.2 Rigid Body Motion.....	192
2.8 POLAR DECOMPOSITION OF F	195
2.8.1 Spectral Representation of Kinematic Tensors.....	197
2.8.2 Evolution of the Polar Decomposition.....	203
2.8.2.1 The Alternative Way to Express the Rate of Kinematic Tensors.....	208
2.9 AREA AND VOLUME ELEMENTS DEFORMATION.....	215
2.9.1 Area Element Deformation.....	215
2.9.1.1 The Material Time Derivative of the Area Element.....	217

2.9.2 The Volume Element Deformation	218
2.9.2.1 The Material Time Derivative of the Volume Element	219
2.9.2.2 Dilatation.....	220
2.9.2.3 Isochoric Motion. Incompressibility	220
2.10 MATERIAL AND CONTROL DOMAINS	220
2.10.1 The Material Domain.....	220
2.10.2 The Control Domain	221
2.11 TRANSPORT EQUATIONS	222
2.12 CIRCULATION AND VORTICITY	224
2.13 MOTION DECOMPOSITION: VOLUMETRIC AND ISOCHORIC MOTIONS.....	225
2.13.1 The Principal Invariants	227
2.14 THE SMALL DEFORMATION REGIME.....	228
2.14.1 Introduction.....	228
2.14.2 Infinitesimal Strain and Spin Tensors	229
2.14.3 Stretch and Unit Extension.....	231
2.14.4 Change of Angle	232
2.14.5 The Physical Interpretation of the Infinitesimal Strain Tensor	232
2.14.5.1 Engineering Strain	233
2.14.6 The Volume Ratio (Dilatation).....	235
2.14.7 The Plane Strain.....	236
2.15 OTHER WAYS TO DEFINE STRAIN.....	239
2.15.1 Motivation.....	239
2.15.2 The Logarithmic Strain Tensor	241
2.15.3 The Biot Strain Tensor	242
2.15.4 Unifying the Strain Tensors	242
2.15.5 One Dimensional Measurements of Strain (1D).....	243
2.15.5.1 Cauchy's strain or Engineering strain or the Linear strain.....	243
2.15.5.2 The Logarithmic or True strain.....	243
2.15.5.3 The Green-Lagrange strain	243
2.15.5.4 The Almansi strain	243
2.15.5.5 The Swaiger strain	244
2.15.5.6 The Kuhn strain.....	244
3 STRESS	245
3.1 INTRODUCTION	245
3.2 FORCES	245
3.2.1 Surface Forces (Traction)	245
3.2.2 Gravitational Force (Body Force).....	246
3.3 STRESS TENSORS.....	247
3.3.1 The Cauchy Stress Tensor.....	248
3.3.1.1 The Traction Vector.....	248
3.3.1.2 Cauchy's Fundamental Postulate	248
3.3.2 The Relationship between the Traction and the Cauchy Stress Tensor	252
3.3.3 Other Measures of Stress	261
3.3.3.1 The First Piola-Kirchhoff Stress Tensor	261
3.3.3.2 The Kirchhoff Stress Tensor	262
3.3.3.3 The Second Piola-Kirchhoff Stress Tensor.....	262
3.3.3.4 The Biot Stress Tensor	265
3.3.3.5 The Mandel Stress Tensor.....	265
3.3.4 Spectral Representation of the Stress Tensors.....	266
4 OBJECTIVITY OF TENSORS	269
4.1 INTRODUCTION	269
4.2 THE OBJECTIVITY OF TENSORS	270

4.2.1 The Deformation Gradient	272
4.2.2 Kinematic Tensors	273
4.2.3 Stress Tensors	275
4.3 TENSOR RATES	277
4.3.1 Objective Rates	278
4.3.1.1 The Convective Rate	279
4.3.1.2 The Oldroyd Rate	279
4.3.1.3 The Cotter-Rivlin Rate	280
4.3.1.4 The Jaumann-Zaremba Rate	280
4.3.1.5 The Green-Naghdi Rate (Polar Rate)	282
4.3.2 The Objective Rate of Stress Tensors	282
5 THE FUNDAMENTAL EQUATIONS OF CONTINUUM MECHANICS.....	285
5.1 INTRODUCTION.....	285
5.2 DENSITY	285
5.2.1 Mass Density.....	286
5.3 FLUX.....	286
5.4 THE REYNOLDS TRANSPORT THEOREM.....	287
5.4.1 Reynolds' Transport Theorem for Volumes with Discontinuities.....	288
5.5 CONSERVATION LAW.....	291
5.6 THE PRINCIPLE OF CONSERVATION OF MASS. THE MASS CONTINUITY EQUATION	291
5.6.1 The Mass Continuity Equation in Lagrangian Description.....	293
5.6.2 Incompressibility	295
5.6.3 The Mass Continuity Equation for Volume with Discontinuities	295
5.7 THE PRINCIPLE OF CONSERVATION OF LINEAR MOMENTUM. THE EQUATIONS OF MOTION	297
5.7.1 Linear Momentum	297
5.7.2 The Principle of Conservation of Linear Momentum	297
5.7.2.1 The Equilibrium Equations.....	298
5.7.3 The Equations of Motion with Discontinuities	301
5.8 THE PRINCIPLE OF CONSERVATION OF ANGULAR MOMENTUM. SYMMETRY OF THE CAUCHY STRESS TENSOR.....	302
5.8.1 Angular Momentum	302
5.8.2 The Principle of Conservation of Angular Momentum	303
5.9 THE PRINCIPLE OF CONSERVATION OF ENERGY. THE ENERGY EQUATION	307
5.9.1 Kinetic Energy.....	307
5.9.2 External and Internal Mechanical Power.....	307
5.9.3 The Balance of Mechanical Energy.....	310
5.9.4 The Internal Energy.....	312
5.9.5 Thermal Power	313
5.9.6 The First Law of Thermodynamics. The Energy Equation.....	314
5.9.6.1 The Energy Equation in Lagrangian Description.....	315
5.9.7 The Energy Equation with Discontinuity	316
5.10 THE PRINCIPLE OF IRREVERSIBILITY. ENTROPY INEQUALITY	318
5.10.1 The Second Law of Thermodynamics.....	318
5.10.2 The Clausius-Duhem Inequality.....	320
5.10.3 The Clausius-Planck Inequality.....	321
5.10.4 The Alternative Form to Express the Clausius-Duhem Inequality	321
5.10.5 The Alternative Form of the Clausius-Planck Inequality	323
5.10.6 Reversible Process	323
5.10.7 Entropy Inequality for a Domain with Discontinuity.....	324
5.11 FUNDAMENTAL EQUATIONS OF CONTINUUM MECHANICS.....	326
5.11.1 Particular Cases	327
5.11.1.1 Rigid Body Motion	327
5.11.1.2 Flux Problems	327

5.12 FLUX PROBLEMS.....	328
5.12.1 Heat Transfer	328
5.12.1.1 Thermal Conduction.....	328
5.12.1.2 Thermal Convection Transfer.....	330
5.12.1.3 Thermal Radiation.....	330
5.12.1.4 The Heat Flux Equation.....	330
5.13 FLUID FLOW IN POROUS MEDIA (FILTRATION)	334
5.14 THE CONVECTION-DIFFUSION EQUATION	335
5.14.1 The Generalization of the Flux Problem.....	338
5.15 INITIAL BOUNDARY VALUE PROBLEM (IBVP) AND COMPUTATIONAL MECHANICS	338
6 INTRODUCTION TO CONSTITUTIVE EQUATIONS.....	341
6.1 INTRODUCTION	341
6.2 THE CONSTITUTIVE PRINCIPLES.....	343
6.2.1 The Principle of Determinism.....	344
6.2.2 The Principle of Local Action	344
6.2.3 The Principle of Equipresence	344
6.2.4 The Principle of Objectivity.....	344
6.2.5 The Principle of Dissipation.....	344
6.3 CHARACTERIZATION OF CONSTITUTIVE EQUATIONS FOR SIMPLE THERMOELASTIC MATERIALS.....	345
6.4 CHARACTERIZATION OF THE CONSTITUTIVE EQUATIONS FOR A THERMOVISCOELASTIC MATERIAL.....	351
6.4.1 Constitutive Equations with Internal Variables.....	355
6.5 SOME EXPERIMENTAL EVIDENCE.....	360
6.5.1 Behavior of Solids.....	360
6.5.1.1 Temperature Effect	362
6.5.1.2 Some Mechanical Properties of Solids	362
6.5.2 Behavior of Fluids	369
6.5.2.1 Viscosity	370
6.5.3 Behavior of Viscoelastic Materials	371
6.5.4 Rheological Models	372
7 LINEAR ELASTICITY	375
7.1 INTRODUCTION	375
7.2 INITIAL BOUNDARY VALUE PROBLEM OF LINEAR ELASTICITY.....	376
7.2.1 Governing Equations.....	376
7.2.2 Initial and Boundary Conditions	377
7.3 GENERALIZED HOOKE'S LAW	377
7.3.1 The Generalized Hooke's Law in Voigt Notation	378
7.3.2 The Component Transformation Law for the Generalized Hooke's Law	379
7.3.2.1 The Matrix Transformation for Stress and Strain Components.....	380
7.3.2.2 The Transformation Matrix of the Elasticity Tensor Components	381
7.4 THE ELASTICITY TENSOR.....	381
7.4.1 Anisotropy and Isotropy.....	381
7.4.2 Types of Elasticity Tensor Symmetry.....	382
7.4.2.1 Triclinic Materials	382
7.4.2.2 Monoclinic Symmetry (One Plane of Symmetry).....	383
7.4.2.3 Orthotropic Symmetry (Two Planes of Symmetry)	384
7.4.2.4 Tetragonal Symmetry	384
7.4.2.5 Transversely Isotropic Symmetry (Hexagonal Symmetry).....	386
7.4.2.6 Cubic Symmetry.....	388
7.4.2.7 Symmetry in All Directions (Isotropy).....	390
7.5 ISOTROPIC MATERIALS.....	392

7.5.1 Constitutive Equations.....	392
7.5.2 Experimental Determination of Elastic Constants.....	393
7.5.2.1 Young's Modulus and Poisson's Ratio	393
7.5.2.2 The Shear and Bulk Moduli.....	394
7.5.3 Restrictions on Elastic Mechanical Properties	398
7.6 STRAIN ENERGY DENSITY.....	399
7.6.1 Decoupling Strain Energy Density.....	402
7.7 THE CONSTITUTIVE LAW FOR ORTHOTROPIC MATERIAL.....	404
7.8 TRANSVERSELY ISOTROPIC MATERIALS	405
7.9 THE SAINT-VENANT'S AND SUPERPOSITION PRINCIPLES	406
7.10 INITIAL STRESS/STRAIN.....	408
7.10.1 Thermal Deformation	408
7.11 THE NAVIER-LAMÉ EQUATIONS.....	410
7.12 TWO-DIMENSIONAL ELASTICITY.....	410
7.12.1 The State of Plane Stress	411
7.12.1.1 The Initial Strain.....	412
7.12.2 The State of Plane Strain	413
7.12.2.1 Thermal Strain.....	415
7.12.3 Axisymmetric Solids	417
7.13 THE UNIDIMENSIONAL APPROACH FOR STRUCTURAL ELEMENTS	418
7.13.1 The Internal Normal Force and the Bending Moments.....	420
7.13.2 The Shear Forces and the Torsional Moment.....	421
7.13.3 The Strain Energy	422
8 HYPERELASTICITY	423
8.1 INTRODUCTION.....	423
8.2 CONSTITUTIVE EQUATIONS.....	424
8.2.1 Elastic Tangent Stiffness Tensors	427
8.2.1.1 The Material Elastic Tangent Stiffness Tensor.....	427
8.2.1.2 The Spatial Elastic Tangent Stiffness Tensor.....	428
8.2.1.3 The Instantaneous Elastic Tangent Stiffness Tensor.....	430
8.2.1.4 The Elastic Tangent Stiffness Pseudo-Tensor	431
8.3 ISOTROPIC HYPERELASTIC MATERIALS	432
8.3.1 The Constitutive Equation in terms of Invariants.....	434
8.3.1.1 The Constitutive Equation in terms of \mathbf{I} and \mathbf{II}	434
8.3.1.2 The Constitutive Equation in terms of \mathbf{I}	436
8.3.2 Series Expansion of the Energy Function	436
8.3.3 Constitutive Equations in terms of the Principal Stretches	437
8.4 COMPRESSIBLE MATERIALS	440
8.4.1 The Stress Tensors.....	442
8.4.2 Compressible Isotropic Materials.....	445
8.4.2.1 Compressible Isotropic Material in terms of the Invariants	446
8.5 INCOMPRESSIBLE MATERIALS	447
8.5.1 Geometrical Interpretation.....	449
8.5.2 Isotropic Incompressible Hyperelastic Materials.....	450
8.5.2.1 Series Expansion of the Energy Function for an Isotropic Incompressible Hyperelastic Materials	451
8.6 EXAMPLES OF HYPERELASTIC MODELS	451
8.6.1 The Neo-Hookean Material Model.....	452
8.6.2 The Ogden Material Model.....	452
8.6.2.1 The Incompressible Ogden Material Model.....	452
8.6.2.2 The Hadamard Material Model.....	453
8.6.3 The Mooney-Rivlin Material Model.....	453
8.6.3.1 Strain Energy Density.....	453
8.6.3.2 The Stress Tensor	454

8.6.4 The Yeoh Material Model	454
8.6.4.1 Strain Energy Density	454
8.6.4.2 The Stress Tensor	454
8.6.5 The Arruda-Boyce Material Model	454
8.6.6 The Blatz-Ko Hyperelastic Model	455
8.6.7 The Saint Venant-Kirchhoff Model	455
8.6.7.1 Strain Energy Density	455
8.6.7.2 The Stress Tensor	456
8.6.7.3 The Elastic Tangent Stiffness Tensor	456
8.6.8 The Compressible Neo-Hookean Material Model	457
8.6.8.1 Strain Energy Density	457
8.6.8.2 The Stress Tensor	457
8.6.8.3 The Elastic Tangent Stiffness Tensor	458
8.6.9 The Gent Model	460
8.6.10 The Statistical Model	460
8.6.11 The Eight-Parameter Model	461
8.7 ANISOTROPIC HYPERELASTICITY	462
8.7.1 Transversely Isotropic Material	463
9 PLASTICITY	465
9.1 INTRODUCTION	465
9.2 THE YIELD CRITERION	467
9.2.1 The Yield Surface for Anisotropic Materials	468
9.2.1.1 The Yield Surface Gradient	468
9.2.2 The Yield Surface for Isotropic Materials	468
9.2.3 The Yield Surface for Materials Independent of Pressure	471
9.2.3.1 The von Mises Yield Criterion	471
9.2.3.2 The Tresca Yield Criterion	475
9.2.4 The Yield Criteria for Pressure-Dependent Materials	477
9.2.4.1 The Mohr-Coulomb Criterion	478
9.2.4.2 The Drucker-Prager Yield Criterion	482
9.2.4.3 The Rankine Yield Criterion	486
9.2.5 Evolution of the Yield Surface	489
9.3 PLASTICITY MODELS IN SMALL DEFORMATION REGIME (UNIAXIAL CASES)	491
9.3.1 Rate-Independent Plasticity Models (Uniaxial Case)	491
9.3.1.1 Perfect Elastoplastic Behavior	491
9.3.1.2 Isotropic Hardening Elastoplastic Behavior	495
9.3.1.3 Kinematic Hardening Elastoplastic Behavior	500
9.3.1.4 Isotropic-Kinematic Elastoplastic Behavior	502
9.4 PLASTICITY IN SMALL DEFORMATION REGIME (THE CLASSICAL PLASTICITY THEORY)	503
9.4.1 The Infinitesimal Strain Tensor and Constitutive Equation	504
9.4.2 Helmholtz Free Energy	505
9.4.3 Internal Energy Dissipation and the Evolution of the Internal Variables	505
9.4.4 The Elastoplastic Tangent Stiffness Tensor	507
9.4.5 The Classical Flow Theory	512
9.4.5.1 Perfect Plasticity	512
9.4.5.2 Isotropic-Kinematic Hardening Plasticity	513
9.5 PLASTIC POTENTIAL THEORY	515
9.6 PLASTICITY IN LARGE DEFORMATION REGIME	518
9.7 LARGE-DEFORMATION PLASTICITY BASED ON THE MULTIPLICATIVE DECOMPOSITION OF THE DEFORMATION GRADIENT	518
9.7.1 Kinematic Tensors	518
9.7.1.1 Deformation and Strain Tensors	520
9.7.1.2 Area and Volume Elements Deformation	524

9.7.1.3 The Spatial Velocity Gradient.....	525
9.7.1.4 The Oldroyd Rate	528
9.7.1.5 The Cotter-Rivlin Rate	529
9.7.2 The Stress Tensors.....	531
9.7.2.1 Stress Tensor Rates.....	532
9.7.3 The Helmholtz Free Energy.....	533
9.7.3.1 Decoupling the Helmholtz Free Energy.....	533
9.7.3.2 The Objectivity Principle for the Helmholtz Free Energy.....	533
9.7.3.3 The Isotropic Helmholtz Free Energy	534
9.7.3.4 The Rate of Change of the Isotropic Helmholtz Free Energy.....	534
9.7.4 The Plastic Potential and the Yield Criterion.....	536
9.7.5 The Dissipation and the Constitutive Equation.....	537
9.7.6 Evolution of the Internal Variables.....	538
9.7.7 The Elastoplastic Tangent Stiffness Tensors.....	539
9.7.7.1 The Elastoplastic Tangent Stiffness Tensor.....	540
9.7.8 The Hyperelastoplastic Model with von Mises Yield Criterion.....	542
9.7.8.1 The Helmholtz Free Energy	542
9.7.8.2 The Stress Tensor	543
9.7.8.3 Formulation Considering the Transformation as an Isochoric Transformation.....	544
9.7.8.4 The Rate of Change of the Helmholtz Free Energy	545
9.7.8.5 Yield Criterion and Evolution of the Internal Variables	546
10 THERMOELASTICITY	547
10.1 THERMODYNAMIC POTENTIALS	547
10.1.1 The Specific Internal Energy	548
10.1.2 The Specific Helmholtz Free Energy	548
10.1.3 The Specific Gibbs Free Energy	549
10.1.4 The Specific Enthalpy	550
10.2 THERMOMECHANICAL PARAMETERS	552
10.2.1 Isothermal and Isentropic Processes	552
10.2.2 Specific Heats and Latent Heat Tensors.....	553
10.3 LINEAR THERMOELASTICITY	556
10.3.1 Linearization of the Constitutive Equations.....	556
10.3.1.1 The Linearized Piola-Kirchhoff Stress Tensor	557
10.3.1.2 The Linearized Heat Flux Vector.....	558
10.3.1.3 Linearized Entropy	560
10.3.1.4 The Helmholtz Free Energy Approach	560
10.3.1.5 Linearization of the Constitutive Equations.....	561
10.3.1.6 Linear Thermoelasticity in a Small Deformation Regime	561
10.3.1.7 Linear Thermoelasticity in a Small Deformation Regime	562
10.4 THE DECOUPLED THERMO-MECHANICAL PROBLEM IN A SMALL DEFORMATION REGIME	565
10.4.1 The Purely Thermal Problem.....	567
10.4.2 The Purely Mechanical Problem.....	568
10.5 THE CLASSICAL THEORY OF THERMOELASTICITY IN FINITE STRAIN (LARGE DEFORMATION REGIME)	569
10.5.1 The Coupled Heat Flux Equation.....	570
10.5.2 The Specific Helmholtz Free Energy	572
10.6 THERMOELASTICITY BASED ON THE MULTIPLICATIVE DECOMPOSITION OF THE DEFORMATION GRADIENT.....	573
10.6.1 Kinematic Tensors.....	574
10.6.2 The Stress Tensor	576
10.6.3 Area and Volume Elements	576
10.6.4 Isotropic Materials	578

10.6.5 The Constitutive Equations	579
10.6.5.1 The Constitutive Equation for Energy	579
10.6.5.2 The Constitutive Equations for Stress	580
10.6.5.3 The Constitutive Equation for Entropy	582
10.7 THERMOPLASTICITY IN A SMALL DEFORMATION REGIME	583
10.7.1 The Specific Helmholtz Free Energy	583
10.7.2 Internal Energy Dissipation	584
11 DAMAGE MECHANICS	587
11.1 INTRODUCTION	587
11.2 THE ISOTROPIC DAMAGE MODEL IN A SMALL DEFORMATION REGIME	588
11.2.1 Description of the Isotropic Damage Model in Uniaxial Cases	588
11.2.1.1 The Constitutive Equation	589
11.2.2 The Three-Dimensional Isotropic Damage Model	590
11.2.2.1 Helmholtz Free Energy	590
11.2.2.2 Internal Energy Dissipation and the Constitutive Equations	591
11.2.2.3 “Ingredients” of the Damage Model	593
11.2.2.4 The Hardening/Softening Law	599
11.2.3 The Elastic-Damage Tangent Stiffness Tensor	601
11.2.4 The Energy Norms	602
11.2.4.1 The Symmetrical Damage Model (Tension-Compression) – Model I	602
11.2.4.2 The Tension-Only Damage Model – Model II	603
11.2.4.3 The Non-Symmetrical Damage Model – Model III	604
11.3 THE GENERALIZED ISOTROPIC DAMAGE MODEL	605
11.3.1 The Strain Energy Function	606
11.3.2 Spherical and Deviatoric Effective Stress	607
11.3.3 Thermodynamic Considerations	607
11.3.4 The Elastic-Damage Tangent Stiffness Tensor	608
11.4 THE ELASTOPLASTIC-DAMAGE MODEL IN A SMALL DEFORMATION REGIME	609
11.4.1 The Elasto-Plastic Damage Model by Simó&Ju (1987) in a Small Deformation Regime	610
11.4.1.1 Helmholtz Free Energy	610
11.4.1.2 Internal Energy Dissipation. Constitutive Equations. Thermodynamic Considerations	611
11.4.1.3 Damage Characterization	612
11.4.1.4 The Elastic-Damage Tangent Stiffness Tensor	612
11.4.1.5 Characterization of the Plastic Response. The Elastoplastic-Damage Tangent Stiffness Tensor	613
11.5 THE TENSILE-COMPRESSIVE PLASTIC-DAMAGE MODEL	615
11.5.1 Helmholtz Free Energy	616
11.5.2 Damage Characterization	617
11.5.3 Evolution of the Damage Parameters	618
11.5.4 Evolution of the Plastic Strain Tensor	619
11.5.5 Internal Energy Dissipation	619
11.6 DAMAGE IN A LARGE DEFORMATION REGIME	621
11.6.1 Gurtin & Francis’ One-Dimensional Model	622
11.6.2 The Rate Independent 3D Elastic-Damage Model	622
11.6.3 The Damage Variable. Damage Evolution	623
11.6.4 The Plastic-Damage Model by Simó & Ju (1989)	624
11.6.4.1 Specific Helmholtz Free Energy	624
11.6.4.2 Internal Energy Dissipation. Constitutive Equations. Thermodynamic Considerations	624
11.6.4.3 Damage Characterization	626
11.6.4.4 The Hyperelastic-Damage Tangent Stiffness Tensor	626

11.6.4.5 Characterization of the Plastic Response. The Effective Elastoplastic-Damage Tangent Stiffness Tensor.....	627
11.6.4.6 The Elastoplastic-Damage Tangent Stiffness Tensor.....	628
11.6.5 The Plastic-Damage Model by Ju(1989).....	628
11.6.5.1 Helmholtz Free Energy.....	629
11.6.5.2 Internal Energy Dissipation. Constitutive Equation. Thermodynamic Considerations.....	629
11.6.5.3 Characterization of Damage. The Tangent Damage Hyperelasticity Tensor ..	630
11.6.5.4 The Elastic-Damage Tangent Stiffness Tensor	630
11.6.5.5 Characterization of Plastic Response. The elastoplastic Tangent Stiffness Tensor.....	631
11.6.5.6 The Elastoplastic-Damage Tangent Stiffness Tensor.....	632
12 INTRODUCTION TO FLUIDS.....	635
12.1 INTRODUCTION	635
12.2 FLUIDS AT REST AND IN MOTION.....	636
12.2.1 Fluids at Rest	636
12.2.2 Fluids in Motion.....	637
12.3 VISCOUS AND NON-VISCOUS FLUIDS.....	637
12.3.1 Non-Viscous Fluids (Perfect Fluids)	638
12.3.2 Viscous Fluids.....	638
12.4 LAMINAR TURBULENT FLOW	639
12.5 PARTICULAR CASES	640
12.5.1 Incompressible Fluids	640
12.5.2 Irrotational Flow	641
12.5.3 Steady Flow.....	641
12.6 NEWTONIAN FLUIDS	642
12.6.1 The Stokes' Condition.....	645
12.7 STRESS, DISSIPATED AND RECOVERABLE POWERS.....	645
12.8 THE FUNDAMENTAL EQUATIONS FOR NEWTONIAN FLUIDS.....	647
12.8.1 The Navier-Stokes-Duhem Equations of Motion.....	648
12.8.1.1 Alternative Form of the Fundamental Equations for Newtonian Fluids.....	648
12.8.1.2 The Fundamental Equations for Incompressible Newtonian Fluid.....	649
12.8.2 The Navier-Stokes Equations of Motion.....	650
12.8.3 The Euler Equations of Motion.....	650
12.8.3.1 Non-Viscous and Incompressible Fluids	651
12.8.3.2 Bernoulli's Equation	652
12.8.4 The Equation of Vorticity	653
